Omni Wheels

Omni-Directional Wheels

Omni-Directional wheels roll forward like normal wheels, but slide sideways with almost no friction (no skidding during turns). Use these wheels to make your robot turn smoothly or build a holonomic drivetrain.

VEPro Omni-Directional Wheels are manufactured from Glass-filled Nylon with high-traction rubber rollers. Compatible with VEPro VersaHubs for driving with a sprocket or can be used with bearings for use on an axle.

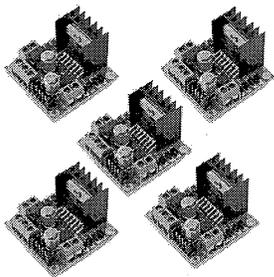

New for the 2019 FTC/PRC season, we've redesigned the 4" Omni-Directional Wheel to have a similar construction style to our 3.25" Omni-Directional Wheel. We decreased the number of rollers, to reinforce the body and improve the strength during sideways impacts. Don't worry, it's only a little wider than the current 4" Omni-Directional Wheel, and should still fit anywhere you were currently using a 4" wheel's offset.

Ships fully assembled. The 3.25" Omni-Directional Wheel (217-4772) only has a center bore, and does not include mounting holes for sprocket, gear, or hub attachment.
